Configuring ITK Using CMake

- Preparing CMake and gathering source codes.
- Configuring ITK
 - Basic configuration
 - Advanced configuration with Modules and Groups
 - Generating build files
 - Compiling
- Building first programme
- Other installation methods
- Wrapping for Python

Other Installation Methods

- Using package managers.

```
sudo apt-get install libinsighttoolkit5-dev
```

```
brew install itk
```

- Wrapping for Python

```
python -m pip install --upgrade pip
```

```
python -m pip install itk
```

Basic System Concepts

- Generic Programming
 - Writing a code that works for any data types.
- Smart Pointers
 - Smart pointers are used to manage the lifetime of dynamically allocated objects
- Exception Handling
 - Handling errors during the execution of the program
- Event Handling
 - Allowing to trigger custom actions in response to certain events like progress updates.
- Multithreading
 - Running multiple threads in parallel
